

▶ Polycom® Unified Communications solution for IBM® Lotus® Sametime® and Lotus Notes®

Polycom to enable seamless integration with Lotus Sametime 8.5 presence and visual communications for improved communication and collaboration experience

Polycom's award-winning voice and video collaboration solutions, coupled with the power of IBM Lotus Sametime and Lotus Notes, create a high performance workplace that allows organisations to implement new and efficient business processes, improve productivity and enable competitive innovation.

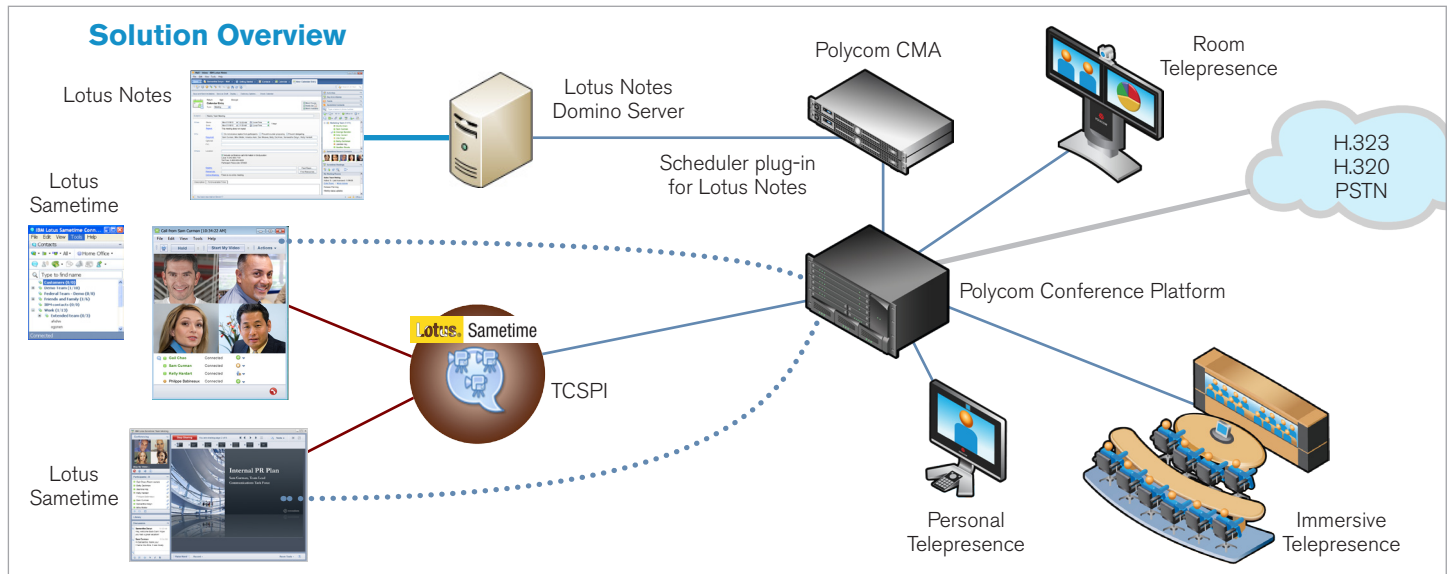

Polycom and IBM solutions

Polycom is expanding the integration between its full suite of voice and video conferencing and telepresence solutions that work with IBM Lotus Sametime 8.5 and Lotus Notes. Instant audio, video and content collaboration sessions—with one or many—are literally a click away. With a single click you can enable a high-performance workforce that can instantly make collaborative decisions even from diverse remote locations. Never before has the demand been so great on your business. Never before has the solution been so easy.

- ▶ Ease of use – escalate IM sessions into ad hoc video calls
- ▶ Seamless integration – Lotus and Polycom seamlessly integrate on demand video and audio collaboration solutions
- ▶ Extended high definition – Desktop, conference rooms and remote sites link in point-to-point and multipoint calls
- ▶ Fast ROI – Immediately enhance team collaboration and effectiveness for faster decision-making and lower costs
- ▶ Leveraged existing investments – Standards-based technology combines to support your network today and in the future
- ▶ Improved productivity and competitive edge – Combined solution creates a high-performance workplace for improved productivity and competitive innovation

► Polycom Unified Communications Solution for IBM Lotus Notes and Lotus Sametime

Typical solution components*

IBM

- IBM Lotus Domino® Server
- IBM Lotus Sametime version 8.5
- IBM Lotus Notes version 7.0.x and 8.0.x

- Polycom HDX™ room and personal telepresence solutions
- Polycom Conference Platforms; Polycom Distributed Management Application™ (DMA™) 7000 and RMX™ 4000 and RMX 2000
- Polycom Communicator™ C100 voice conferencing device

These solutions may be connected using Polycom RMX conference platform

- Polycom CMA Desktop application
- Polycom VX™1500 business media phone
- Polycom RealPresence™ Experience (RPX™) and Polycom Telepresence Experience® (TPX®) immersive telepresence solutions (custom VNOC service required)
- Traditional video conference systems (Polycom VSX® system and third-party devices)

*Subject to change

Improves Collaboration

With the Polycom Converged Management Application (CMA) 4000/5000 solution, you can maintain familiar IBM Lotus Sametime and Lotus Notes interfaces on the desktop to enable voice and video collaboration.

Furthermore, Polycom's standards-based voice and video solutions will extend the reach of the IBM Lotus Sametime Instant Message clients, to allow full integration of desktop video to room-based high definition systems to immersive telepresence solutions.

Additionally, the Polycom real-time media conferencing platform provides virtual meeting rooms and allows users to launch on-demand and scheduled voice, video and unified (voice and video) conferences with other standards-based video and voice endpoints.

Extends Lotus Sametime Environment

- Click to conference from IBM SameTime 8.5
- Lotus Notes Scheduling Plug-In: CMA 4000/5000 servers providing familiar scheduling interface from Lotus Notes to schedule a video conference, as well as management and monitoring of entire video network
- PC Speakerphone: the Polycom Communicator C100 voice conferencing unit delivers high definition voice for Sametime clients
- High Definition Visual Communication
 - Polycom HDX 4000, HDX 6000, HDX 7000, HDX 8000, HDX 9000 systems
 - Polycom RPX and TPX immersive telepresence solutions (through RMX conference platform)
- Multiparty conferencing: Polycom conference platforms connect disparate endpoints (Polycom CMA Desktop, Polycom HDX and standards-based H.323 and ISDN endpoints, immersive telepresence and analogue voice endpoints) into a single conference
